AB A conformational anal. and docking study of nitrophenoxyalkylbenzylamine derivs. with inhibitory activities against acetylcholinesterase was carried out in an attempt to analyze their structure-activity relationships based on the enzyme-inhibitor interaction. First, stable conformers of the inhibitors alone were obtained from the conformational anal. by mol. dynamics. Next, a docking study of the inhibitors into the ligand binding site was performed. Among the resulting stable complex structures, it was found that in the case of the two stereoisomers with a 7-membered ring, the more active one of the two formed a much more stable complex structure. On the other hand, complex structures with comparable energies were obtained for both stereoisomers that had no 7-membered ring and showed similar inhibitory activities. Lastly, structural features of the complex models of a series of inhibitors with side chains of different lengths were evaluated and corresponded well to their inhibitory activities.

AB The instant invention relates to a combination of α -2- δ ligand and an AChE inhibitor for use in therapy, particularly in the treatment of pain, particularly neuropathic pain. Particularly preferred α -2- δ ligands are gabapentin and pregabalin. Particularly preferred AChE inhibitors are donepezil (Aricept), tacrine (Cognex), rivastigmine (Exelon), physostigmine (Synapton), galantamine (Reminyl), metrifonate (Promem), neostigmine (Prostigmin) and icopezil. Thus pessary compns. contained the above ingredient 250, anhydrous dextrose 380, potato starch 363, and Mg stearate 7 mg. The preparation of some of the compds. is given.

AB A dual inhibitor of acetylcholinesterase (AChE) and serotonin transporter (SERT), RS-1259, was newly synthesized. RS-1259 simultaneously inhibited AChE and SERT in the brain following an oral administration in mice and rats. Actual simultaneous elevation of extra-cellular levels of 5-HT and ACh in the rat hippocampus was confirmed by microdialysis. The compound was as effective as SERT inhibitors such as fluoxetine and fluvoxamine in a 5-hydroxytryptophan-enhancing test in mice. Spatial memory deficits in the two-platform task of a water maze in aged rats were ameliorated by RS-1259 as well as donepezil. Both RS-1259 and donepezil increased the awake episodes in the daytime EEG of rats. Although RS-1259 was weaker than donepezil in enhancing central cholinergic transmission, as observed by ACh elevation in the hippocampus and memory enhancement in aged rats, the efficacy of RS-1259 on the consciousness level, which reflects the whole activity in the brain, was almost the same as that of donepezil. These results suggest that both cholinergic and serotonergic systems are involved in maintaining brain arousal and that a dual inhibitor of AChE and SERT may be useful for the treatment of cognitive disorders associated with reduced brain activity such as in Alzheimer's disease.

GI

AB We have designed and synthesized a dual inhibitor of acetylcholinesterase (AChE) and serotonin transporter (SERT) as a novel class of treatment drugs for Alzheimer's disease on the basis of a hypothetical model of the AChE active site. Dual inhibitions of AChE and SERT would bring about greater therapeutic effects than AChE inhibition alone and avoid adverse peripheral effects caused by excessive AChE inhibition. Compound (I) exhibited potent inhibitory activities against AChE (IC₅₀=101 nM) and SERT (IC₅₀=42 nM). Furthermore, I showed inhibitory activities of both AChE and SERT in mice brain following oral administration.

AB Title compds. [I; R1 = C1-6 alkyl; R2, R3 independently = H, alkyl; Ra = C1-6 alkyl, H; Q = aryl; A = C1-6 alkylene; E = single bond, oxygen,

10/629,108

sulfur; X1, X2 independently = oxygen, sulfur], stereoisomers, a pharmacol. acceptable salt, or ester are prepared and are in vitro tested for acetylcholinesterase inhibition effects. The title compound II·HCl was prepared from dimethylcarbamic acid chloride, 1-(3-hydroxyphenyl)ethanone, 4-(trifluoromethyl)benzaldehyde, and methylamine via condensation reaction. The title compound III·HCl showed acetylcholinesterase inhibition at IC₅₀(nM) = 19 and serotonin reuptake inhibition at IC₅₀(nM) = 6.
